Step	Expected result
Get a token according to the variant number using API request	Token was generated
Go to the website. Pass the authorization. Pass the token generated in step 1 using cookie (token parameter). Refresh the page	Projects page was opened. Footer contains correct variant number after refreshing
Go to the Nexage project page	The tests on the first page are sorted in descending order by date
Return to the previous page in the browser (project page). Click on +Add. Enter a project name and save. Call JS method closePopUp() to close the adding a project window. Refresh the page	Alert with a message about successful saving appeared after saving the project. Adding a project window was closed after calling JS method. The project appeared in the list after refreshing
Go to the created project page. Click on +Add. Fill all required fields and attach current page screenshot. Save the test. Click somewhere outside the pop-up window to close it.	Alert with a message about successful saving appeared after saving the test. Test was displayed without refreshing the page
Go to the created test page. Verify that information is correct.	Fields values are correct. Screenshot is the same as the one that has been attached.
